  TITLE     Domains of extracellular region of human platelet derived growth
            factor receptor polypeptides
  JOURNAL   Patent: US 5686572-A 5 11-NOV-1997;
FEATURES             Location/Qualifiers
     source          1. .6375
                     /organism="unknown"
                     /mol_type="unassigned DNA"
ORIGIN

  Query Match             74.3%;  Score 4765.6;  DB 6;  Length 6375;
  Best Local Similarity   99.3%;  Pred. No. 0;
  Matches 4880;  Conservative    0;  Mismatches   20;  Indels   13;  Gaps    9;

RESULT 18
I73452
LOCUS I73452 4100 bp DNA linear PAT 03-APR-1998
DEFINITION Sequence 3 from patent US 5686572.
ACCESSION I73452
VERSION I73452.1 GI:3009593
KEYWORDS .
SOURCE Unknown.
ORGANISM Unknown.
Unclassified.
REFERENCE 1 (bases 1 to 4100)
AUTHORS Wolf,D., Tomlinson,J.E., Fretto,L.J., Giese,N.A., Escobedo,J.A. and Williams,L.Thomas.
TITLE Domains of extracellular region of human platelet derived growth factor receptor polypeptides
JOURNAL Patent: US 5686572-A 3 11-NOV-1997;
FEATURES Location/Qualifiers
source 1. .4100
/organism="unknown"
/mol_type="unassigned DNA"
ORIGIN

Query Match 63.0%; Score 4037.2; DB 6; Length 4100;

AR441854
LOCUS       AR441854               3270 bp    DNA     linear   PAT 20-FEB-2004
DEFINITION  Sequence 1 from patent US 6667173.
ACCESSION   AR441854
VERSION     AR441854.1  GI:42668122
KEYWORDS    .
SOURCE      Unknown.
  ORGANISM  Unknown.
            Unclassified.
REFERENCE   1  (bases 1 to 3270)
  AUTHORS   Kazlauskas,A. and Ikuno,Y.
  TITLE     Nucleic acids encoding platelet derived growth factor-alpha
            receptors
  JOURNAL   Patent: US 6667173-A 1 23-DEC-2003;
            The Schepens Eye Research Institute; Boston, MA
FEATURES             Location/Qualifiers
     source          1. .3270
                     /organism="unknown"
                     /mol_type="genomic DNA"

RESULT 31
AR441856
LOCUS AR441856 3270 bp DNA linear PAT 20-FEB-2004
DEFINITION Sequence 5 from patent US 6667173.
ACCESSION AR441856
VERSION AR441856.1 GI:42668124
KEYWORDS .
SOURCE Unknown.
ORGANISM Unknown.
Unclassified.
REFERENCE 1 (bases 1 to 3270)
AUTHORS Kazlauskas,A. and Ikuno,Y.
TITLE Nucleic acids encoding platelet derived growth factor-alpha receptors
JOURNAL Patent: US 6667173-A 5 23-DEC-2003;
The Schepens Eye Research Institute; Boston, MA
FEATURES Location/Qualifiers
source 1. .3270
/organism="unknown"
/mol_type="genomic DNA"
ORIGIN

Query Match 50.9%; Score 3266.8; DB 6; Length 3270;

RESULT 32
RATAPDGFR
LOCUS       RATAPDGFR               6264 bp    mRNA    linear   ROD 27-APR-1993
DEFINITION  Rat alpha-platelet-derived growth factor receptor mRNA.
ACCESSION   M63837
VERSION     M63837.1  GI:202929
KEYWORDS    alpha-platelet-derived growth factor receptor.
SOURCE      Rattus norvegicus (Norway rat)
  ORGANISM  Rattus norvegicus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia;
            Sciurognathi; Muroidea; Muridae; Murinae; Rattus.
REFERENCE   1  (bases 1 to 6264)
  AUTHORS   Lee,K.H., Bowen-Pope,D.F. and Reed,R.R.
  TITLE     Isolation and characterization of the alpha platelet-derived growth
            factor receptor from rat olfactory epithelium
  JOURNAL   Mol. Cell. Biol. 10 (5), 2237-2246 (1990)
   PUBMED   2157969
COMMENT     Original source text: Rat (strain Sprague-Dawley) olfactory
            epithelium, cDNA to mRNA.

COMMENT     On Oct 2, 2002 this sequence version replaced gi:22138722.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu/gsc
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0231C18
                Drafting Center: WIBR
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            This sequence is not the entire insert of the clone. This clone is
            overlapped by AC098868.

            A transposon was identified in the finished region of this clone
            and removed prior to submission. The transposon would insert after
            base pair 8353 of this sequence.

            There is an unresolved homopolymeric repeat from base 45105 to
            45144.

            Data from AC016089 was used to finish this clone.

            The sequence of AC025013 has been incorporated into AC098587.

            R. M.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 114 Row: g Column: 4
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 6755011.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 135 Row: h Column: 23
            THis clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 15451787.

  TITLE     Direct Submission
  JOURNAL   Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 29, 2005 this sequence version replaced gi:62860298.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM

                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: FFVF
                Center clone name: CH240-91E18
            -------------- Summary Statistics
              Assembly program: Atlas 3.0;
                Consensus quality: 199154 bases at least Q40
                Consensus quality: 200661 bases at least Q30
                Consensus quality: 201199 bases at least Q20
                Estimated insert size: 203634; sum-of-contigs estimation
                Quality coverage: 7x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    27297: contig of 27297 bp in length

            McDowell,J., Pearson,R., Stantripop,S., Thomas,P.J., Touchman,J.W.,
            Tsurgeon,C., Vogt,J.L., Walker,M.A., Wetherby,K.D., Wiggins,L.,
            Young,A., Zhang,L.-H. and Green,E.D.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 97 Row: c Column: 8
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 214652.

RESULT 47
AC120348

LOCUS	AC120348 244565 bp DNA linear ROD 20-NOV-2004
DEFINITION	Mus musculus chromosome 5, clone RP23-55P22, complete sequence.
ACCESSION	AC120348
VERSION	AC120348.9 GI:55908981
KEYWORDS	HTG.
SOURCE	Mus musculus (house mouse)
ORGANISM	Mus musculus Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Glires; Rodentia; Sciurognathi; Muroidea; Muridae; Murinae; Mus.
REFERENCE	1 (bases 1 to 244565)

  TITLE     Direct Submission
  JOURNAL   Submitted (30-SEP-2003) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Feb 10, 2002 this sequence version replaced gi:18482277.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html

AUTHORS Rat Genome Sequencing Consortium.
TITLE Direct Submission
JOURNAL Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 13, 2003 this sequence version replaced gi:22857471.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GLGS
Center clone name: CH230-64M8
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 208311 bases at least Q40
Consensus quality: 212093 bases at least Q30
Consensus quality: 214818 bases at least Q20
Estimated insert size: 217886; sum-of-contigs estimation
Quality coverage: 8x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 234012: contig of 234012 bp in length
* 234013 234112: gap of unknown length
* 234113 235304: contig of 1192 bp in length.

PT   Type alpha platelet-derived growth factor receptor gene - useful for
PT   transforming cells to express novel protein receptor and also susceptible
PT   to genetic engineering.
XX
PS   Claim 3; Fig 3; 64pp; English.
XX
CC   The TR4 clone is the largest cDNA clone related to the T11 genomic clone,
CC   isolated from a library prepd. from human thymus DNA. The T4 cDNA clone
CC   was isolated from a M426 human embryo fibroblast cDNA library. The exons
CC   shown were determined from the T11 genomic clone. The gene has bee mapped
CC   to chromosome 4 at location q 11-12, which is within the same region as
CC   the c-kit proto-oncogene. The coding region can be introduced into the
CC   pSV2 gpt vector with a simian sarcoma virus LTR as a promoter and
CC   expressed in a host. The resulting protein is a novel PDGF receptor
CC   designated type alpha (the known receptor is designated type beta). The
CC   cDNA can be used also be used to investigate the mechanisms of PDGF
CC   regulatory processes or in bioassays for detect- ing related genes,
CC   particularly for identification of classes of tumour cells or of genetic
CC   defects in connective tissue and/or healing response. (Updated on 25-MAR-
CC   2003 to correct PA field.)

PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
PT cancer cells as compared to their normal non-cancerous ovarian cells are
PT used to characterize stage, grade, histological type of ovarian cancer.
XX
PS Disclosure; SEQ ID NO 21714; 106pp; English.
XX
CC The invention relates to nucleic acid markers which are overexpressed in
CC ovarian cancer cells as compared to their expression in normal (i.e. non-
CC cancerous) ovarian cells. The invention also relates to polypeptides
CC encoded by the markers, antibodies that selectively bind to the
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk
CC of developing ovarian cancer involving inhibiting expression of a gene
CC corresponding to a marker of the invention and a method of treating a
CC patient afflicted with ovarian cancer comprising providing to cells of
CC the patient an antisense oligonucleotide complementary to a marker of the
CC invention. The markers are useful for assessing if a patient is afflicted
CC with ovarian cancer, which involves comparing the level of expression of
CC a marker in a patient sample and a normal level of expression of the
CC marker in a control non-ovarian cancer sample. A difference between the
CC expression levels indicates ovarian cancer. The level of expression of a
CC marker corresponds to a secreted protein or to a transcribed
CC polynucleotide or its portion. The level of expression of the marker is
CC assessed by detecting the presence in the sample, a protein or protein
CC fragment corresponding to the marker. The presence of protein or protein
CC fragment is detected using an antibody that specifically binds with the
CC protein or protein fragment. Alternatively, the level of expression of
CC the marker is assessed by detecting the presence of a transcribed
CC polynucleotide which anneals with the marker or anneals with a portion of
CC the polynucleotide comprising the marker, under stringent conditions. The
CC marker is also used for monitoring the progression of ovarian cancer in a
CC patient which involves detecting expression of the marker in a patient
CC sample at a first point in time, repeating the method at a subsequent
CC time and comparing the level of expression. The method is carried out
CC using an ovarian tissue sample. A composition comprising a marker,
CC polypeptide or antibody of the invention is used to treat ovarian cancer.
CC This sequence represents a human ovarian cancer DNA marker of the
CC invention.

PT Diagnosing endometrial cancer comprises determining expression of nucleic
PT acid molecules or expression products that are differentially expressed

PT in normal and malignant endometrium.
XX
PS Claim 1; Page 109-113; 233pp; English.
XX
CC The invention relates to diagnosing endometrial cancer in a subject
CC suspected of having endometrial cancer comprising determining the
CC expression of a set of nucleic acid molecules or expression products in
CC an endometrial sample suspected of being cancerous, where the set of
CC nucleic acid molecules comprises at least 2 nucleic acid molecules
CC selected from 50 fully defined sequences as given in the specification.
CC The nucleic acids are used as an array of at least 2 of the 50 nucleic
CC acids bound to a solid substrate. Also included is a solid-phase protein
CC microarray comprising at least 2 antibodies or its antigen binding
CC fragments, that specifically bind at least 2 different polypeptides from
CC the 50 fully defined sequences as given in the specification, fixed to a
CC solid substrate. The methods and arrays are useful for the diagnosis of
CC endometrial cancer, selecting and monitoring treatment regimes and
CC identification of lead compounds useful for the treatment of endometrial
CC cancer. The present sequence is one of 50 genes differentially expressed
CC between cancerous and non-cancerous samples

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 6856; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 709; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT A composition comprising a plurality of cDNAs, useful for detecting
PT altered expression of genes in an immunological response or for
PT diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma
PT or osteoarthritis.
XX
PS Claim 1; SEQ ID NO 1194; 50pp; English.
XX
CC The invention relates to a composition comprising a plurality of cDNAs
CC for detecting the altered expression of genes in an immunological
CC response. The invention also relates to a method of diagnosing or
CC monitoring the treatment of an immunopathological condition in a sample,
CC comprising obtaining nucleic acids from a sample, contacting the nucleic
CC acids of the sample with an array comprising the plurality of cDNAs under
CC conditions to form one or more hybridisation complexes, detecting the
CC hybridisation complexes and comparing the levels of the detected
CC hybridisation complexes with the level of hybridisation complexes

CC detected in a non-diseased sample, where an altered level of the detected
CC hybridisation complexes correlates with the presence of an
CC immunopathological condition. Also disclosed are an expression profile
CC comprising a microarray and a plurality of detectable complexes and a
CC method for identifying a plurality of polynucleotide probes. The cDNAs
CC are useful as hybridisable array elements in a microarray for monitoring
CC the expression of target polynucleotides. The microarray can be used in
CC the diagnosis of an immunopathology, such as Crohn's disease, asthma,
CC ulcerative colitis, hypereosinophilia, irritable bowel syndrome,
CC osteoarthritis, rheumatoid arthritis or acute monocytic leukaemia, and in
CC identifying agents for the treatment of the diseases. The microarray may
CC also be used in drug discovery and development, toxicological and
CC carcinogenicity studies, forensics or pharmacogenomics. The composition
CC may also be used in purification of a subpopulation of mRNAs, cDNAs or
CC genomic fragments. This sequence represents a human cDNA of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html.

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 649; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   New compositions having a number of first, second and third
PT   polynucleotide probes, useful in research and diagnostic applications in
PT   cancer and immunological conditions e.g. AIDS, diabetes, osteoporosis and
PT   infections.
XX
PS   Claim 15; SEQ ID NO 1194; 16pp; English.
XX
CC   The invention relates to polynucleotides which are used as probes to
CC   detect genes differentially expressed in an immunological response,
CC   abundantly expressed in an immunological response and/or coding for a
CC   polypeptide known to regulate blood cell biology. The polynucleotides are
CC   useful in research and diagnostic applications particularly in cancer and
CC   immunopathological conditions, such as AIDS, allergies, anaemia, asthma,
CC   atherosclerosis, bronchitis, ulcerative colitis, diabetes, multiple
CC   sclerosis, osteoporosis, pancreatitis, infections and arthritis. The
CC   present sequence represents a human lymph node cDNA used to detect blood
CC   cell and immunological response gene expression. Note: The present
CC   sequence does not appear in the printed specification but was obtained in
CC   electronic format from the USPTO web site
CC   (seqdata.uspto.gov/sequence.html?DocID=20040077003).

PT Predicting clinical outcome for a patient diagnosed with cancer comprises
PT determining the expression level of one or more genes, and compared to
PT the amount found in a reference cancer tissue set.
XX

```
PS   Disclosure; SEQ ID NO 337; 198pp; English.
XX
CC   The invention relates to a method of predicting clinical outcome for a
CC   patient diagnosed with cancer by determining the expression level of one
CC   or more genes, or their expression products, selected from p53BP2,
CC   cathepsin B, cathepsin L, Ki67/MiB1, and thymidine kinase in a cancer
CC   tissue obtained from the patient, normalized against control gene(s), and
CC   compared to the amount found in a reference cancer tissue set. The
CC   specification also discloses an array comprising polynucleotides
CC   hybridizing to the following genes: FOXMI, PRAME, Bcl2, STKI5, CEGP1, Ki-
CC   67, GSTM1, CA9, PR, BBC3, NME1, SURV, GATA3, TFRC, YB-1, DPYD, GSTM3,
CC   RPS6KB1, Sro, Chk1, ID1, EstR1, p27, CCNBI, XIAP, Chk2, CDC25B, IGFIR,
CC   AK055699, PI3KC2A, TGFB3, BAGI1, CYP3A4, EpCAM, VEGFC, pS2, hENT1, WISP1,
CC   HNF3A, NFKBp65, BRCA2, EGFR, TK1, VDR, Contig51037, pENTI, EPHXI, IFIA,
CC   CDHI, HIFlt, IGFBP3, CTSB, Her2 and DIABLO, immobilized on a solid
CC   surface. The methods are useful for predicting clinical outcome for a
CC   patient diagnosed with cancer, classifying cancer, and predicting the
CC   likelihood of long-term survival of a breast cancer patient, or a patient
CC   diagnosed with invasive breast cancer or with estrogen receptor (ER)-
CC   positive invasive breast cancer. This sequence corresponds to a gene
CC   sequence whose expression is detected by the method of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Example 1; SEQ ID NO 1; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA wild-type
CC   cDNA of the invention.

PT   Treating an ocular neovascular disorder, comprises administering a
PT   platelet derived growth factor antagonist and a vascular endothelial
PT   growth factor antagonist, simultaneously or within ninety days of each
PT   other.
XX
PS   Disclosure; SEQ ID NO 13; 112pp; English.
XX
CC   The invention relates to a method of treating a patient diagnosed with or
CC   at risk for developing a neovascular disorder, or suppressing a
CC   neovascular disorder in a patient. The method is useful for treating a
CC   patient diagnosed with or at risk for developing a neovascular disorder
CC   or suppressing a neovascular disorder in a patient. The neovascular
CC   disorder is an ocular neovascular disorder, psoriasis or rheumatoid
CC   arthritis. The ocular neovascular disorder is ischemic retinopathy, iris
CC   neovascularization, intraocular neovascularization, age-related macular
CC   degeneration, corneal neovascularization, retinal neovascularization,
CC   choroidal neovascularization, diabetic retinal ischemia, or proliferative
CC   diabetic retinopathy. The present sequence represents human PDGFR DNA.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 20; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant V561D cDNA of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 3; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant D842V cDNA of the invention.

PT New isolated variant platelet derived growth factor alpha (PDGFRA)
PT polypeptide, useful for screening for a compound useful in influencing
PT PDGFRA-mediated neoplasia in a mammal.
XX
PS Claim 13; SEQ ID NO 24; 302pp; English.
XX
CC The invention relates to a novel isolated variant platelet derived growth
CC factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC for screening for a compound that may influence PDGFRA-mediated neoplasia
CC in a mammal. The current sequence is that of the human PDGFRA cancer-
CC related activating mutant Deletion RD841-842KI cDNA of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 9; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant ER561-562 cDNA of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 7; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant HSDN845-848P cDNA of the invention.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1434; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA

```
CC   nucleic acids. The antibody is useful for detecting the presence or
CC   absence of cancer cells in an individual which involves contacting cells
CC   from the individual with the antibody and detecting a complex of a CA
CC   protein from the cancer cells and the antibody, where the detection of
CC   the complex correlates with the presence of cancer cells in the
CC   individual. The composition is useful for inhibiting growth of cancer
CC   cells in an individual or for delivering a therapeutic agent to cancer
CC   cells in an individual. The invention is also useful for diagnosing
CC   cancer, for treating cancer and for inhibiting expression of a CA gene in
CC   a cell. This sequence represents human cancer-associated cDNA of the
CC   invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 5; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant DIMH842-845 cDNA of the invention.

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 5285; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX

PS Claim 7; SEQ ID NO 476; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a human myocardial infarction-
CC associated gene containing one or more SNP's of the invention. Note: This
CC sequence was not shown in the specification. The sequence has come from
CC an electronic sequence listing downloaded from the WIPO website.

PT New isolated variant platelet derived growth factor alpha (PDGFRA)
PT polypeptide, useful for screening for a compound useful in influencing
PT PDGFRA-mediated neoplasia in a mammal.
XX
PS Claim 13; SEQ ID NO 22; 302pp; English.
XX
CC The invention relates to a novel isolated variant platelet derived growth
CC factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC for screening for a compound that may influence PDGFRA-mediated neoplasia
CC in a mammal. The current sequence is that of the human PDGFRA cancer-
CC related activating mutant RVIES560-564 cDNA of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 13; SEQ ID NO 11; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant SPDGHE566-571R cDNA of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 15; SEQ ID NO 26; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant consensus DNA of the invention.

XX
CC The present invention describes human cancer-associated (CA) nucleotide
CC sequences (I). Also described: (1) an expression vector comprising (I);
CC (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridises to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (I) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.
CC The present sequence represents a human CA gene cDNA sequence, which is
CC given in the exemplification of the present invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

XX
CC The sequence given encodes one allele of type A human platelet- derived
CC growth factor (PDGF) receptor (PDGF-R). This receptor is typically found
CC on cells of mesenchymal origin. It acts while in the form of two
CC transmembrane glycoproteins, each of which is about 180 kD. This receptor
CC has three major regions. The first is a transmembrane region, which spans
CC the membrane once, separating the regions of the receptor exterior to the
CC cell from those interior to the cell. The second region is an
CC extracellular region which contains the domains which bind the PDGF. The

```
CC   third region is an intracellular region which posseses a tyrosine kinase
CC   activity. This tyrosine kinase domain is notable in having an insert of
CC   approx. 100 amino acids, as compared with most other receptor tyrosine
CC   kinase domains which are contiguous or have shorter insert sequences.
CC   Fragments of this sequence between 8 and 400 amino acids comprising one
CC   or more PDGF ligand binding region from the extracellular domain may be
CC   used to bind a PDGF ligand. (Updated on 25-MAR-2003 to correct PN field.)

XX
PT   DNA encoding platelet-derived growth factor - used to transform cells for
PT   culturing to detect PDG agonists and antagonists.
XX
PS   Claim 1; Fig 1; 30pp; English.
XX
CC   Gene product may be expressed from a transformed cell. It has utility in
CC   dection of PDGF agonist and antagonist analogues, binding AA, AB and BB
CC   isoforms. PDGF agonists may be used to enhance wound healing, and
CC   antagonists may be used to block the effects of PDGF eg. in treatment of
CC   atherosclerosis or fibrotic diseases. (Updated on 25-MAR-2003 to correct
CC   PA field.)

PT   Determining whether agent has defined biological activity, by making
PT   comparison e.g. comparing efficacy value, toxicity value and classifier
PT   value of agent to reference values, and using results to determine
PT   whether agent has activity.
XX
PS   Example 2; SEQ ID NO 914; 51pp; English.
XX
CC   The present invention relates to a methods for screening biologically
CC   active agents, such as candidate drugs, to determine whether the agent
CC   possesses a defined biological activity. The methods involve making one
CC   or more comparisons chosen from comparing efficacy value of agent to
CC   reference efficacy value, comparing a toxicity value of the agent to
CC   reference toxicity value, comparing a classifier value of the agent to
CC   reference classifier value, and using the comparison result(s) to
CC   determine whether the agent possesses the defined biological activity.
CC   Also claimed is a population of oligonucleotide probes (I) specific for
CC   measuring the expression levels of members of a classifier population of
CC   genes or a toxicity-related population of genes. (I) are useful for
CC   measuring the expression levels of genes that are useful for identifying
CC   agonists or partial agonists of Peroxisome Proliferator-Activated
CC   Receptor (PPAR) gamma. ADZ61226-ADZ61295 are oligonucleotide probes which
CC   are useful in the method of the invention to measure the expression
CC   pattern of the toxicity-related population of mouse genes ADZ61171-
CC   ADZ61225. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1429; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents murine cancer-associated cDNA of the
CC invention.

CC The present invention describes human cancer-associated (CA) nucleotide
CC sequences (I). Also described: (1) an expression vector comprising (I);
CC (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridises to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (I) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.
CC The present sequence represents a human CA gene cDNA sequence, which is
CC given in the exemplification of the present invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Example 1; Page 34-38; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC   human platelet derived growth factor receptor (PDGFR) alpha

PT   New microarray comprising probes for genes involved in
PT   psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a
PT   condition associated with PNI activity, e.g., inflammatory or infectious
PT   diseases.
XX
PS   Claim 1; SEQ ID NO 62; 254pp; English.
XX
CC   The invention relates to a new microarray which comprises probes for
CC   genes involved in psychoneuroendocrinimmune (PNI) activity. The
CC   microarray is useful in diagnosing a condition associated with PNI
CC   activity, such as CFS, type-2 diabetes, allergic condition, inflammation,
CC   cancer and infection. The present sequence represents a
CC   psychoneuroendocrinimmune gene expressed sequence tag. Note the
CC   specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
CC   SEQ ID NO 1829 are provided.

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 14; Page 61-64; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC   human platelet derived growth factor receptor (PDGFR) alpha mutant V859M

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 14; Page 41-45; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC   human platelet derived growth factor receptor (PDGFR) alpha mutant E587K

PT New polypeptide for treating or preventing diseases associated with an
PT abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT or -beta.
XX
PS Claim 14; Page 54-58; 127pp; English.
XX
CC The invention describes a polypeptide comprising a portion of the
CC receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC treating or preventing diseases and conditions associated with an
CC abnormal PDGF level or response, such as cell proliferation, cell
CC migration, extracellular matrix synthesis and secretion or cell
CC contraction. Exemplary diseases or disorders include cell proliferative
CC diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC scleroderma, keloids, hypertrophic scars, skin wound healing or
CC proliferative vitreoretinopathy). The method may be used in identifying
CC compounds for treating or preventing the development of diseases
CC involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC human platelet derived growth factor receptor (PDGFR) alpha mutant D818N

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 14; Page 48-51; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC   human platelet derived growth factor receptor (PDGFR) alpha mutant T665M

PT Determining whether agent has defined biological activity, by making
PT comparison e.g. comparing efficacy value, toxicity value and classifier
PT value of agent to reference values, and using results to determine
PT whether agent has activity.
XX
PS Example 2; SEQ ID NO 481; 51pp; English.
XX
CC The present invention relates to a methods for screening biologically
CC active agents, such as candidate drugs, to determine whether the agent
CC possesses a defined biological activity. The methods involve making one
CC or more comparisons chosen from comparing efficacy value of agent to
CC reference efficacy value, comparing a toxicity value of the agent to
CC reference toxicity value, comparing a classifier value of the agent to
CC reference classifier value, and using the comparison result(s) to
CC determine whether the agent possesses the defined biological activity.
CC Also claimed is a population of oligonucleotide probes (I) specific for
CC measuring the expression levels of members of a classifier population of
CC genes or a toxicity-related population of genes. (I) are useful for
CC measuring the expression levels of genes that are useful for identifying
CC agonists or partial agonists of Peroxisome Proliferator-Activated
CC Receptor (PPAR) gamma. ADZ60827-ADZ61170 are oligonucleotide probes which
CC are useful in the method of the invention to measure the expression
CC pattern of the toxicity-related population of rat genes ADZ60495-
CC ADZ60826. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1431; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated genomic DNA of
CC the invention.

PT   New cancer-associated nucleic acid for diagnosing, preventing or treating
PT   cancer (e.g. lymphoma) or for screening agents that may be used for
PT   treating or preventing cancer.
XX
PS   Claim 16; SEQ ID NO 166; 143pp; English.
XX
CC   The present invention describes human cancer-associated (CA) nucleotide
CC   sequences (I). Also described: (1) an expression vector comprising (I);
CC   (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC   for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC   within an open reading frame of a CA sequence; (5) an isolated antibody,
CC   or its antigen binding fragment, that binds to the above polypeptide; (6)
CC   a hybridoma that produces the monoclonal antibody described above; (7) a
CC   pharmaceutical composition comprising the antibody and a pharmaceutical
CC   excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC   the above (monoclonal) antibody or polynucleotide that selectively
CC   hybridises to any of the polynucleotide sequences mentioned above; (9)
CC   methods for diagnosing cancer or for detecting the presence or absence of
CC   cancer cells in an individual; (10) a method for inhibiting growth of
CC   cancer cells in an individual; (11) a method for delivering a therapeutic
CC   agent to cancer cells in an individual; (12) an electronic library
CC   comprising the polynucleotide or polypeptide, or their fragments,
CC   mentioned above; (13) a method of screening for anticancer activity; (14)
CC   methods for detecting cancer associated with expression of a polypeptide
CC   or the presence of the antibody in a test cell or serum sample; (15) a
CC   method for screening for a bioactive agent capable of modulating the
CC   activity of a CA protein encoded by the above nucleic acid molecule; and
CC   (16) a method for treating cancers. (I) has cytostatic activity, and can
CC   be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC   and as a G-protein coupled receptor antagonist. The compositions and
CC   methods of the present invention can be used for diagnosing, preventing
CC   and treating cancer, especially lymphomas. They may also be used in
CC   screening for agents that may be used for treating or preventing cancer.
CC   The present sequence represents a human CA gene sequence, which is given
CC   in the exemplification of the present invention. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT New microarray comprising probes for genes involved in
PT psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a
PT condition associated with PNI activity, e.g., inflammatory or infectious
PT diseases.
XX
PS Claim 8; SEQ ID NO 1802; 254pp; English.
XX
CC The invention relates to a new microarray which comprises probes for
CC genes involved in psychoneuroendocrinimmune (PNI) activity. The
CC microarray is useful in diagnosing a condition associated with PNI
CC activity, such as CFS, type-2 diabetes, allergic condition, inflammation,
CC cancer and infection. The present sequence represents a
CC psychoneuroendocrinimmune gene expressed sequence tag. Note the
CC specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
CC SEQ ID NO 1829 are provided.

XX
CC AAC77607 to AAC78448 encode the human cancer associated proteins given in
CC AAB43398 to AAB44239. The proteins can have activities based on the
CC tissues and cells the genes are expressed in. Example of activities
CC include: cytostatic; proliferative; vulnerary; immunomodulator;
CC antidiabetic; antiasthmatic; antirheumatic; antiarthritic;
CC antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral;
CC dermatological; neuroprotective; cardiant; thrombolytic; coagulant;
CC nootropic; vasotropic; antipsoriatic and antiangiogenic. The
CC polynucleotides and polypeptides can be used for preventing, treating or
CC ameliorating medical conditions and diagnosing pathological conditions.
CC Polynucleotides, polypeptides, antibodies, agonists and antagonists from
CC the present invention may be used to treat immune disorders by activating
CC or inhibiting the proliferation, differentiation or mobilisation of
CC immune cells, to treat disorders of haematopoietic cells, autoimmune
CC disorders, allergic reactions, graft versus host disease and organ
CC rejection, modulate haemostatic or thrombolytic activity, modulate
CC inflammation, cancers, cardiovascular disorders, neurological disease and
CC bacterial or viral infections. The peptides, nucleotides, antibodies,
CC agonists and antagonists may be also be used in drug screens. AAC78449 to
CC AAC78457 and AAB44240 represent sequences used in the exemplification of
CC the present invention

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Example 1; Page 67-69; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This sequence encodes
CC   human platelet derived growth factor receptor (PDGFR) alpha truncation
CC   mutant

PT New tyrosine kinase fusion polypeptide, useful for diagnosing disease
PT conditions associated with the fusion polypeptide, and for identifying
PT agents for treating associated hyperproliferative disease conditions,
PT e.g. cancer or psoriasis.
XX
PS Claim 13; SEQ ID NO 8; 95pp; English.
XX
CC This sequence encodes an NM_030917-PDGFR-alpha fusion protein splice
CC variant. The fusion polypeptide of the invention comprises a C-terminal
CC tyrosine kinase domain and an N-terminal domain. The fusion protein has a
CC constitutively activated kinase activity, and is present in other than
CC its naturally occurring environment. The N- and C-terminal domains are
CC from chromosome 4 encoded proteins, and the fusion protein is not a
CC product of a translocation event. The fusion polypeptide or the
CC polynucleotide encoding it, are useful for determining whether a host
CC suffers from a disease condition, e.g. a hyperproliferative disease
CC condition. An agent that inhibits the activity or expression of the
CC fusion polypeptide is useful for treating a hyperproliferative disease
CC condition, such as cancer, atherosclerosis, graft coronary vascular
CC disease after transplantation, restenosis after angioplasty or stent
CC replacement, epidermal hyperproliferation, tissue remodeling and repair,
CC psoriasis, multiple sclerosis, rheumatoid arthritis, diabetes mellitus,
CC or inflammatory bowel disease. The polynucleotides are also useful as
CC probes and primers in hybridization applications, or in the
CC identification of homologues, expression regulatory factors or expression
CC patterns in biological specimens.

PT e.g. cancer or psoriasis.
XX
PS Claim 13; SEQ ID NO 6; 95pp; English.
XX
CC This sequence encodes an NM_030917-PDGFR-alpha fusion protein splice
CC variant. The fusion polypeptide of the invention comprises a C-terminal
CC tyrosine kinase domain and an N-terminal domain. The fusion protein has a
CC constitutively activated kinase activity, and is present in other than
CC its naturally occurring environment. The N- and C-terminal domains are
CC from chromosome 4 encoded proteins, and the fusion protein is not a
CC product of a translocation event. The fusion polypeptide or the
CC polynucleotide encoding it, are useful for determining whether a host
CC suffers from a disease condition, e.g. a hyperproliferative disease
CC condition. An agent that inhibits the activity or expression of the
CC fusion polypeptide is useful for treating a hyperproliferative disease
CC condition, such as cancer, atherosclerosis, graft coronary vascular
CC disease after transplantation, restenosis after angioplasty or stent
CC replacement, epidermal hyperproliferation, tissue remodeling and repair,
CC psoriasis, multiple sclerosis, rheumatoid arthritis, diabetes mellitus,
CC or inflammatory bowel disease. The polynucleotides are also useful as

```
CC   probes and primers in hybridization applications, or in the
CC   identification of homologues, expression regulatory factors or expression
CC   patterns in biological specimens.

CC The present invention describes human cancer-associated (CA) nucleotide
CC sequences (I). Also described: (1) an expression vector comprising (I);
CC (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC within an open reading frame of a CA sequence; (5) an isolated antibody,
CC or its antigen binding fragment, that binds to the above polypeptide; (6)
CC a hybridoma that produces the monoclonal antibody described above; (7) a
CC pharmaceutical composition comprising the antibody and a pharmaceutical
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC the above (monoclonal) antibody or polynucleotide that selectively
CC hybridises to any of the polynucleotide sequences mentioned above; (9)
CC methods for diagnosing cancer or for detecting the presence or absence of
CC cancer cells in an individual; (10) a method for inhibiting growth of
CC cancer cells in an individual; (11) a method for delivering a therapeutic
CC agent to cancer cells in an individual; (12) an electronic library
CC comprising the polynucleotide or polypeptide, or their fragments,
CC mentioned above; (13) a method of screening for anticancer activity; (14)
CC methods for detecting cancer associated with expression of a polypeptide
CC or the presence of the antibody in a test cell or serum sample; (15) a
CC method for screening for a bioactive agent capable of modulating the
CC activity of a CA protein encoded by the above nucleic acid molecule; and
CC (16) a method for treating cancers. (I) has cytostatic activity, and can
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC and as a G-protein coupled receptor antagonist. The compositions and
CC methods of the present invention can be used for diagnosing, preventing
CC and treating cancer, especially lymphomas. They may also be used in
CC screening for agents that may be used for treating or preventing cancer.
CC The present sequence represents a human CA gene sequence, which is given
CC in the exemplification of the present invention. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

PT   Nucleic acid array useful for detecting cancer associated nucleic acid,
PT   comprises two or more nucleic acid probes.
XX
PS   Disclosure; SEQ ID NO 1428; 198pp; English.
XX
CC   The invention relates to a nucleic acid array for detecting a cancer
CC   associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC   The invention also relates to a peptide array comprising two or more
CC   isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC   that binds to a polypeptide, an isolated antibody or its fragment which
CC   binds to a polypeptide, which is prepared by immunizing a host animal
CC   with a composition comprising the polypeptide or its antigen binding
CC   fragment and collecting cells from the host expressing antibodies against
CC   the antigen or its antigen binding fragment, a composition comprising the
CC   antibody and a carrier, a method of screening for anticancer activity, a
CC   method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC   method of treating cancer and a method of inhibiting expression of a CA
CC   nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC   nucleic acids. The antibody is useful for detecting the presence or
CC   absence of cancer cells in an individual which involves contacting cells
CC   from the individual with the antibody and detecting a complex of a CA
CC   protein from the cancer cells and the antibody, where the detection of
CC   the complex correlates with the presence of cancer cells in the
CC   individual. The composition is useful for inhibiting growth of cancer
CC   cells in an individual or for delivering a therapeutic agent to cancer
CC   cells in an individual. The invention is also useful for diagnosing
CC   cancer, for treating cancer and for inhibiting expression of a CA gene in
CC   a cell. This sequence represents murine cancer-associated genomic DNA of
CC   the invention.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1432; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated cDNA of the
CC invention.

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 7; SEQ ID NO 477; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a human myocardial infarction-
CC associated gene containing one or more SNP's of the invention. Note: This
CC sequence was not shown in the specification. The sequence has come from
CC an electronic sequence listing downloaded from the WIPO website.

  TITLE     Direct Submission
  JOURNAL   Submitted (16-NOV-2003) Celera Genomics, 45 West Gude Drive,
            Rockville, MD 20850, USA
COMMENT     This sequence was made by sequencing genomic exons and ordering
            them based on alignment.

            A.N., Gibbs, R.A.

            Clone distribution: MGC clone distribution information can be found
            through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov
            Series: IRAK Plate: 23 Row: j Column: 3
            This clone was selected for full length sequencing because it
            passed the following selection criteria: matched mRNA gi: 6755011
            This clone has the following problem: no polyA-tail.

                     /organism="Homo sapiens"
                     /mol_type="mRNA"
                     /db_xref="taxon:9606"
                     /clone="IMAGE:5836983"
                     /tissue_type="Chondrosarcoma"
                     /dev_stage="Adult"
                     /lab_host="DH10B (Life Technologies)"
                     /clone_lib="NCI_CGAP_ED1"
                     /note="Organ: Left Pubic Bone; Vector: pT7T3-Pac
                     (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                     Site_2: Not I; NCI_CGAP_ED1 is a normalized cDNA library
                     containing the following tissue(s): Chondrosarcoma cell
                     line CS5. The library was constructed according to
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. First strand cDNA synthesis was primed with an
                     oligo-dT primer containing a Not I site. Double stranded
                     cDNA was ligated to an EcoR I adaptor, digested with Not
                     I, and cloned directionally into pT7T3-Pac vector. The
                     oligonucleotide used to prime the synthesis of
                     first-strand cDNA contains a library tag sequence that is
                     located between the Not I site and the (dT)18 tail. The
                     sequence tag for this library is GCTCAAGGCT.
                     TAG_TISSUE=chondrosarcoma
                     TAG_LIB=UI-H-ED1
                     TAG_SEQ=CGTCAAGGCT"

                     modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     NCI_CGAP_Ct1 is a normalized cDNA library containing the
                     following tissue(s): Osteoarthritic Cartilage The library
                     was constructed according to Bonaldo, Lennon and Soares,
                     Genome Research, 6:791-806, 1996. First strand cDNA
                     synthesis was primed with an oligo-dT primer containing a
                     Not I site. Double stranded cDNA was ligated to an EcoR I
                     adaptor, digested with Not I, and cloned directionally
                     into pT7T3-Pac vector. The oligonucleotide used to prime
                     the synthesis of first-strand cDNA contains a library tag
                     sequence that is located between the Not I site and the
                     (dT)18 tail. The sequence tag for this library is
                     TGATCACGCT.
                     TAG_TISSUE=osteoarthritic cartilage
                     TAG_LIB=UI-H-EU1
                     TAG_SEQ=TGATCACGCT"

                     NCI_CGAP_Car1 is a cDNA library containing the following
                     tissue(s): Osteoarthritic Cartilage The library was
```

constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is TGATCACGCT.
TAG_TISSUE=osteoarthritic cartilage
TAG_LIB=UI-H-EU0
TAG_SEQ=TGATCACGCT"

                     /clone_lib="NCI_CGAP_ED0"
                     /note="Organ: Left Pubic Bone; Vector: pT7T3-Pac
                     (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                     Site_2: Not I; NCI_CGAP_ED0 is a cDNA library containing
                     the following tissue(s): Chondrosarcoma cell line CS5. The
                     library was constructed according to Bonaldo, Lennon and
                     Soares, Genome Research, 6:791-806, 1996. First strand
                     cDNA synthesis was primed with an oligo-dT primer
                     containing a Not I site. Double stranded cDNA was ligated
                     to an EcoR I adaptor, digested with Not I, and cloned
                     directionally into pT7T3-Pac vector. The oligonucleotide
                     used to prime the synthesis of first-strand cDNA contains
                     a library tag sequence that is located between the Not I
                     site and the (dT)18 tail. The sequence tag for this
                     library is GCTCAAGGCT.
                     TAG_TISSUE=chondrosarcoma
                     TAG_LIB=UI-H-ED0
                     TAG_SEQ=CGTCAAGGCT"

/note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; UI-CF-EC1 is a normalized cDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AAGTGCTTAC.

/note="Organ: Eye; Vector: pCMVSPORT6; Two different donor eyes (75-80 years old) yielded approximately 600 mg of dissected RPE/choroid tissue. This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pCMVSPORT6 vector was constructed at Life Technologies (Rockville, MD; now part of Invitrogen Corp), essentially following the protocols of the SuperScript Plasmid System (Invitrogen Corp. <http://www.invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the NotI/MluI sites of the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

/note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction,ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

/note="Organ: Left Pelvis; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_EI1 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is ACACTTGCAC.
TAG_TISSUE=chondrosarcoma
TAG_LIB=UI-H-EI1

                     /note="Organ: Enchondroma; Vector: pT7T3-Pac (Pharmacia)
                     with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
                     NCI_CGAP_FG1 is a normalized cDNA library obtained from a
                     pool of mRNA from 2 cell lines from Enchondroma tissues.
                     The library was constructed according to Bonaldo, Lennon
                     and Soares, Genome Research, 6:791-806, 1996. First strand
                     cDNA synthesis was primed with an oligo-dT primer
                     containing a Not I site.  Double stranded cDNA was ligated
                     to an EcoR I adaptor, digested with Not I, and cloned
                     directionally into pT7T3-Pac vector. The oligonucleotide
                     used to prime the synthesis of first-strand cDNA contains
                     a library tag sequence that is located between the Not I
                     site and the (dT)18 tail. The sequence tag for this
                     library is CGGTCACTC. The cell lines were provided by Dr.
                     James Martin from the University of Iowa.
                     TAG_TISSUE=Enchondroma cell line (Mix of EN1 and EN2)
                     TAG_LIB=UI-H-FG1
                     TAG_SEQ=CGGTCACTC"

                     /strain="C57BL/6"
                     /db_xref="taxon:10090"
                     /clone="IMAGE:5707337"
                     /tissue_type="whole brain"
                     /dev_stage="embryo 15.5 dpc"
                     /lab_host="DH10B (T1 phage resistant)"
                     /clone_lib="NIH_BMAP_EV0"
                     /note="Organ: brain; Vector: pYX-Asc; Site_1: EcoR I;
                     Site_2: Not I; The library was constructed according to
                     Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                     1996. Denatured mRNa was size fractionated on a 1% agarose
                     gel. First strand cDNA synthesis was primed with an
                     oligo-dT primer containing a Not I site.  Double stranded
                     cDNA was size selected according to mRNA size fraction,
                     ligated with EcoR I adaptor, digested with Not I, and then
                     cloned directionally into pYX-Asc vector. The library tag
                     sequence located between the Not I site and the polyA
                     tail, is GTGCGTGGAA. This library was created for the
                     University of Iowa Mouse Brain Molecular Anatomy Project
                     (BMAP): 'Gene Discovery in the Developing Mouse Nervous
                     System', supported by National Instututes of Mental Health
                     (NIMH), Hemin Chin, Ph.D., program coordinator."

RESULT 1
US-09-769-987-1
; Sequence 1, Application US/09769987
; Patent No. 6660488
; GENERAL INFORMATION:
;  APPLICANT: Matsui, Toshimitsu
;  APPLICANT:  Aaronson, Stuart A.
;  APPLICANT:  Pierce, Jacalyn H.
;  TITLE OF INVENTION: Antibodies for the Alpha Platelet-Derived Growth Factor Receptor
;  FILE REFERENCE: 14014.0266U2
;  CURRENT APPLICATION NUMBER: US/09/769,987
;  CURRENT FILING DATE:  2001-10-12
;  PRIOR APPLICATION NUMBER: US 08/460,656
;  PRIOR FILING DATE: 1995-06-02
;  PRIOR APPLICATION NUMBER: US 08/439,095
;  PRIOR FILING DATE: 1995-05-11
;  PRIOR APPLICATION NUMBER: US 07/915,884
;  PRIOR FILING DATE: 1992-07-20
;  PRIOR APPLICATION NUMBER: US 07/308,282
;  PRIOR FILING DATE: 1989-02-09
;  NUMBER OF SEQ ID NOS: 2
;  SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 1
;   LENGTH: 6412
;   TYPE: DNA
;   ORGANISM: Artificial Sequence
;   FEATURE:
;   OTHER INFORMATION: Description of Artificial Sequence; No. 6660488e =
;   OTHER INFORMATION: synthetic construct
;   NAME/KEY: CDS

```
; Sequence 1194, Application US/09023655
; Patent No. 6607879
;  GENERAL INFORMATION:
;    APPLICANT:  Cocks, Benjamin G.
;    APPLICANT:  Susan G. Stuart
;    APPLICANT:  Jeffrey J. Seilhamer
;    TITLE OF INVENTION:  COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
;    TITLE OF INVENTION:  EXPRESSION
;    NUMBER OF SEQUENCES:  1508
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  INCYTE PHARMACEUTICALS, INC.
;      STREET:  3174 PORTER DRIVE
;      CITY:  PALO ALTO
;      STATE:  CALIFORNIA
;      COUNTRY:  USA
;      ZIP:  94304
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  Word Perfect 6.1 for Windows/MS-DOS 6.2
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/09/023,655
;      FILING DATE:  HEREWITH
;      CLASSIFICATION:
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:
;      FILING DATE:
;      CLASSIFICATION:
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Zeller, Karen J.
;      REGISTRATION NUMBER:  37,071
;      REFERENCE/DOCKET NUMBER:  PA-0001 US
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (650) 855-0555
;      TELEFAX:  (650) 845-4166
;  INFORMATION FOR SEQ ID NO:  1194:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  6378 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  single
;      TOPOLOGY:  linear
;    IMMEDIATE SOURCE:
;      LIBRARY:  GENBANK
;      CLONE:  g189733

US-09-919-497-40
; Sequence 40, Application US/09919497
; Patent No. 6773883
; GENERAL INFORMATION:
; APPLICANT: Mutter, George L.
; TITLE OF INVENTION: PROGNOSTIC CLASSIFICATION OF ENDOMETRIAL CANCER
; FILE REFERENCE: B0801/7225
; CURRENT APPLICATION NUMBER: US/09/919,497
; CURRENT FILING DATE: 2001-07-31
; PRIOR APPLICATION NUMBER: US 60/221,735
; PRIOR FILING DATE: 2000-07-31

RESULT 4
US-09-949-016-832
; Sequence 832, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
;  APPLICANT: VENTER, J. Craig et al.
;  TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
;  TITLE OF INVENTION:  WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
;  FILE REFERENCE: CL001307
;  CURRENT APPLICATION NUMBER: US/09/949,016
;  CURRENT FILING DATE:  2000-04-14
;  PRIOR APPLICATION NUMBER: 60/241,755
;  PRIOR FILING DATE: 2000-10-20
;  PRIOR APPLICATION NUMBER: 60/237,768
;  PRIOR FILING DATE: 2000-10-03
;  PRIOR APPLICATION NUMBER: 60/231,498
;  PRIOR FILING DATE: 2000-09-08
;  NUMBER OF SEQ ID NOS: 207012
;  SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 832
;   LENGTH: 6378
;   TYPE: DNA
;   ORGANISM: Human
US-09-949-016-832

US-08-462-728-1
; Sequence 1, Application US/08462728
; Patent No. 6043211
; GENERAL INFORMATION:
; APPLICANT: WILLIAMS, Lewis T.
; APPLICANT: ESCOBEDO, Jaime A.
; TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR RECEPTORS
; NUMBER OF SEQUENCES: 14
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Townsend and Townsend and Crew
; STREET: One Market, Steuart Street Tower, 20th Floor
; CITY: San Francisco
; STATE: California
; COUNTRY: USA
; ZIP: 94105
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.30
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/08/462,728
; FILING DATE: 05-JUN-1995
; CLASSIFICATION: 435
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/309,322
; FILING DATE: 10-FEB-1989
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/151,414
; FILING DATE: 02-FEB-1988
; ATTORNEY/AGENT INFORMATION:
; NAME: Dow, Karen B.
; REGISTRATION NUMBER: 29,684
; REFERENCE/DOCKET NUMBER: 2307K-267-2-2
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 415/326-2400
; TELEFAX: 415/326-2422
; INFORMATION FOR SEQ ID NO: 1:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 6373 base pairs
; TYPE: nucleic acid
; STRANDEDNESS: single
; TOPOLOGY: linear
; MOLECULE TYPE: cDNA
; FEATURE:
; NAME/KEY: CDS
; LOCATION: 129..3398
US-08-462-728-1

RESULT 6
US-08-461-917-1
; Sequence 1, Application US/08461917
; Patent No. 6372438
; GENERAL INFORMATION:
; APPLICANT: WILLIAMS, Lewis T.
; APPLICANT: ESCOBEDO, Jaime A.
; TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR RECEPTORS
; NUMBER OF SEQUENCES: 14
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Townsend and Townsend and Crew
; STREET: One Market, Steuart Street Tower, 20th Floor
; CITY: San Francisco
; STATE: California
; COUNTRY: USA
; ZIP: 94105
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.30
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/08/461,917
; FILING DATE: 05-JUN-1995
; CLASSIFICATION: 435
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/309,322
; FILING DATE: 10-FEB-1989
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/151,414
; FILING DATE: 02-FEB-1988
; ATTORNEY/AGENT INFORMATION:
; NAME: Dow, Karen B.
; REGISTRATION NUMBER: 29,684
; REFERENCE/DOCKET NUMBER: 2307K-267-2-4
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 415/326-2400
; TELEFAX: 415/326-2422
; INFORMATION FOR SEQ ID NO: 1:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 6373 base pairs
; TYPE: nucleic acid
; STRANDEDNESS: single
; TOPOLOGY: linear
; MOLECULE TYPE: cDNA
; FEATURE:
; NAME/KEY: CDS
; LOCATION: 129..3398
US-08-461-917-1

Query Match 74.5%; Score 4777; DB 3; Length 6373;

US-08-464-436-1
; Sequence 1, Application US/08464436
; Patent No. 6514723
; GENERAL INFORMATION:
; APPLICANT: WILLIAMS, Lewis T.
; APPLICANT: ESCOBEDO, Jaime A.
; TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR RECEPTORS
; NUMBER OF SEQUENCES: 14
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Townsend and Townsend and Crew
; STREET: One Market, Steuart Street Tower, 20th Floor
; CITY: San Francisco
; STATE: California
; COUNTRY: USA
; ZIP: 94105
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.30
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/08/464,436
; FILING DATE: 05-JUN-1995
; CLASSIFICATION: 435
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/309,322
; FILING DATE: 10-FEB-1989
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: US 07/151,414
; FILING DATE: 02-FEB-1988
; ATTORNEY/AGENT INFORMATION:
; NAME: Dow, Karen B.

```
;      REGISTRATION NUMBER:  29,684
;      REFERENCE/DOCKET NUMBER:  2307K-267-2-3
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  415/326-2400
;      TELEFAX:  415/326-2422
;  INFORMATION FOR SEQ ID NO:  1:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  6373 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  single
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  129..3398

RESULT 8
US-08-464-436-1
; Sequence 1, Application US/08464436
; Patent No. 6642022
;   GENERAL INFORMATION:
;        APPLICANT: WILLIAMS, Lewis T.
;                   ESCOBEDO, Jaime A.
;        TITLE OF INVENTION: PLATELET-DERIVED GROWTH FACTOR RECEPTORS
;        NUMBER OF SEQUENCES: 14
;        CORRESPONDENCE ADDRESS:
;             ADDRESSEE: Townsend and Townsend and Crew
;             STREET: One Market, Steuart Street Tower, 20th Floor
;             CITY: San Francisco
;             STATE: California
;             COUNTRY: USA
;             ZIP: 94105
;        COMPUTER READABLE FORM:
;             MEDIUM TYPE: Floppy disk
;             COMPUTER: IBM PC compatible
;             OPERATING SYSTEM: PC-DOS/MS-DOS
;             SOFTWARE: PatentIn Release #1.0, Version #1.30
;        CURRENT APPLICATION DATA:
;             APPLICATION NUMBER: US/08/464,436
;             FILING DATE: 05-Jun-1995
;             CLASSIFICATION: <Unknown>
;        PRIOR APPLICATION DATA:
;             APPLICATION NUMBER: US 07/309,322
;             FILING DATE: 10-FEB-1989
;             APPLICATION NUMBER: US 07/151,414
;             FILING DATE: 02-FEB-1988
;        ATTORNEY/AGENT INFORMATION:
;             NAME: Dow, Karen B.
;             REGISTRATION NUMBER: 29,684
;             REFERENCE/DOCKET NUMBER: 2307K-267-2-3
;        TELECOMMUNICATION INFORMATION:
;             TELEPHONE: 415/326-2400
;             TELEFAX: 415/326-2422
;   INFORMATION FOR SEQ ID NO: 1:
;        SEQUENCE CHARACTERISTICS:
;             LENGTH: 6373 base pairs
;             TYPE: nucleic acid
;             STRANDEDNESS: single
;             TOPOLOGY: linear
;        MOLECULE TYPE: cDNA
;        FEATURE:
;             NAME/KEY:  CDS
;             LOCATION:  129..3398
;        SEQUENCE DESCRIPTION: SEQ ID NO: 1:
US-08-464-436-1

RESULT 9
US-08-168-917-5
; Sequence 5, Application US/08168917
; Patent No. 5686572
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND
;      STREET:  Steuart Street Tower, 20th Floor \ One Market
;      STREET:  Plaza
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/168,917
;      FILING DATE:
;      CLASSIFICATION:  435
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:  US/07/650,793
;      FILING DATE:
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Ching, Edwin P.
;      REGISTRATION NUMBER:  34,090
;      REFERENCE/DOCKET NUMBER:  12418-14
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 326-2400
;      TELEFAX:  (415) 326-2422
;  INFORMATION FOR SEQ ID NO:  5:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  6375 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  double
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA to mRNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    ORIGINAL SOURCE:
;      ORGANISM:  Homo Sapiens
;      STRAIN:  lambda gt10
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  129..3395
;      OTHER INFORMATION:  /note= "nucleotide number 1 of this
;      OTHER INFORMATION:  sequence is identical to the nucleotide number 1
;      OTHER INFORMATION:  of the previous 4100 long sequence"
US-08-168-917-5

  Query Match             74.3%;  Score 4765.6;  DB 2;  Length 6375;

RESULT 10
US-08-460-510-5
; Sequence 5, Application US/08460510
; Patent No. 5872218
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND and CREW
;      STREET:  One Market Plaza, Steuart Street Tower, Suite 2000
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/460,510
;      FILING DATE:  02-JUN-1995
;      CLASSIFICATION:  435
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Dow, Karen B.
;      REGISTRATION NUMBER:  29,684
;      REFERENCE/DOCKET NUMBER:  012418-001430
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 326-2400
;      TELEFAX:  (415) 326-2422
;  INFORMATION FOR SEQ ID NO:  5:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  6375 base pairs
;      TYPE:  nucleic acid
```

```
;       STRANDEDNESS:  double
;       TOPOLOGY:  linear
;     MOLECULE TYPE:  cDNA to mRNA
;     HYPOTHETICAL:  NO
;     ANTI-SENSE:  NO
;     ORIGINAL SOURCE:
;       ORGANISM:  Homo Sapiens
;       STRAIN:  lambda gt10
;     FEATURE:
;       NAME/KEY:  CDS
;       LOCATION:  129..3395
;       OTHER INFORMATION:  /note= "nucleotide number 1 of this
;       OTHER INFORMATION:  sequence is identical to the nucleotide number 1
;       OTHER INFORMATION:  of the previous 4100 long sequence"
US-08-460-510-5

  Query Match             74.3%;  Score 4765.6;  DB 2;  Length 6375;
  Best Local Similarity   99.3%;  Pred. No. 0;

RESULT 11
US-08-460-490-5
; Sequence 5, Application US/08460490
; Patent No. 5891652
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND and CREW
;      STREET:  One Market Plaza, Steuart Street Tower, Suite 2000
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/460,490
;      FILING DATE:  02-JUN-1995
;      CLASSIFICATION:  435
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Dow, Karen B.
;      REGISTRATION NUMBER:  29,684
;      REFERENCE/DOCKET NUMBER:  012418-001420
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 326-2400
;      TELEFAX:  (415) 326-2422
;  INFORMATION FOR SEQ ID NO:  5:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  6375 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  double
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA to mRNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    ORIGINAL SOURCE:
;      ORGANISM:  Homo Sapiens
;      STRAIN:  lambda gt10
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  129..3395
;      OTHER INFORMATION:  /note= "nucleotide number 1 of this
;      OTHER INFORMATION:  sequence is identical to the nucleotide number 1
;      OTHER INFORMATION:  of the previous 4100 long sequence"
US-08-460-490-5

  Query Match             74.3%;  Score 4765.6;  DB 2;  Length 6375;

RESULT 14
US-08-168-917-3
; Sequence 3, Application US/08168917
; Patent No. 5686572
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND
;      STREET:  Steuart Street Tower, 20th Floor \ One Market
;      STREET:  Plaza
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/168,917
;      FILING DATE:
;      CLASSIFICATION:  435
;    PRIOR APPLICATION DATA:
;      APPLICATION NUMBER:  US/07/650,793
;      FILING DATE:
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Ching, Edwin P.
;      REGISTRATION NUMBER:  34,090
;      REFERENCE/DOCKET NUMBER:  12418-14
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 326-2400
;      TELEFAX:  (415) 326-2422
;  INFORMATION FOR SEQ ID NO:  3:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  4100 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  double
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA to mRNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    ORIGINAL SOURCE:
;      ORGANISM:  Homo Sapiens
;      STRAIN:  lambda gt10
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  129..3395
US-08-168-917-3

RESULT 16
US-08-460-490-3
; Sequence 3, Application US/08460490
; Patent No. 5891652
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND and CREW
;      STREET:  One Market Plaza, Steuart Street Tower, Suite 2000
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:
;      APPLICATION NUMBER:  US/08/460,490
;      FILING DATE:  02-JUN-1995
;      CLASSIFICATION:  435
;    ATTORNEY/AGENT INFORMATION:
;      NAME:  Dow, Karen B.
;      REGISTRATION NUMBER:  29,684
;      REFERENCE/DOCKET NUMBER:  012418-001420
;    TELECOMMUNICATION INFORMATION:
;      TELEPHONE:  (415) 326-2400
;      TELEFAX:  (415) 326-2422
;  INFORMATION FOR SEQ ID NO:  3:
;    SEQUENCE CHARACTERISTICS:
;      LENGTH:  4100 base pairs
;      TYPE:  nucleic acid
;      STRANDEDNESS:  double
;      TOPOLOGY:  linear
;    MOLECULE TYPE:  cDNA to mRNA
;    HYPOTHETICAL:  NO
;    ANTI-SENSE:  NO
;    ORIGINAL SOURCE:
;      ORGANISM:  Homo Sapiens
;      STRAIN:  lambda gt10
;    FEATURE:
;      NAME/KEY:  CDS
;      LOCATION:  129..3395
US-08-460-490-3
